BP3's Brazos Portal is the best choice in user experience for bridge to cloud. With Brazos Portal federation users can receive their BPM tasks from both the on-premise IBM BPM instance and the Cloud instance in the same place. There is no need to log into two different portals during transition when you use Brazos Portal.

By federating tasks into a single portal you can slowly drain older instances from your on-premise installation of IBM BPM while starting all new instances in your cloud environment.

Fast Facts:

- Only BP3's Brazos Portal is able to federate across these two environments
- Without the Brazos Portal users would need to log into two environments to gain access to their tasks
- Migrating long running instances from an on-premise installation to BPMOC is not recommended and using drain methodology is the best way to allow those instances to complete.

Benefits:

- With a one time installation of Brazos Portal end users don't have to be exposed to new environment
- Brazos Portal allows for customization of end users task list
- Brazos Portal can be customized to match your brand
- When used in conjunction with Brazos UI users will have a consistent user experience across environments

About BP3:

BP3 delivers transformative solutions that help enterprise-level organizations improve overall performance by connecting people, processes and technologies. We provide business process, decision management and analytics software and services to Fortune 500 businesses in the financial services, retail, healthcare and energy sectors.
